

State Programs - Managed by MSC

- Breath Alcohol Instrument Laboratory
- Driver Improvement Program
- Ignition Interlock Monitoring Program
- Missouri Motorcycle Safety Program
- DRE/SFST State Coordinator
- Sobriety Checkpoint Supervisor
- Statewide Traffic Safety Enforcement Grants

Additional Programs and Courses

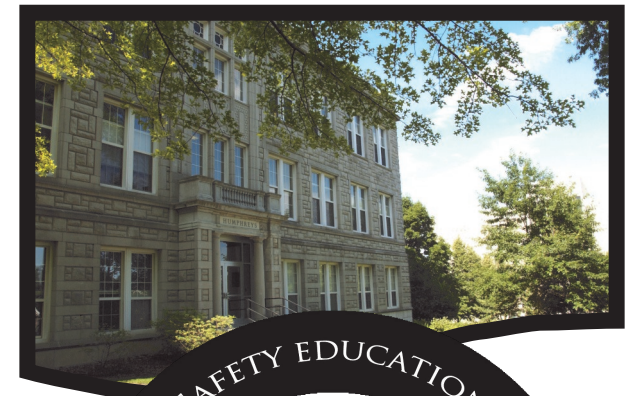

- Emergency Driving Courses
- Crash Investigation and Reconstruction
- State Seatbelt Observational Surveys
- Driver Education Teacher Preparation
- CDL 3rd Party Examiner Training
- School Bus Driver Trainer Certification
- National Congress on School Transportation Conference (NCST)

Missouri Safety Center's Highway Safety Instructional Park

The Missouri Safety Center and its staff are housed in three locations on the University of Central Missouri's campus:

- The lab and state-of-the-art training facilities are located in the Highway Safety Instructional Park and Marshall Building located at 1200 South Holden Street in Warrensburg

Goals of the Missouri Safety Center

- Coordinate with Missouri's state and local agencies, professional organizations and business and industry professionals to meet their highway safety, training and awareness needs.
- Expand the number of safety programs offered and the diversity of target populations served to meet changing safety needs and to remain in the forefront of safety technologies.
- Encourage Center staff to maintain close working relationships with safety professionals, as well as safety organizations and agencies to develop more responsive and timely safety programming.
- Promote interdisciplinary activities with other University of Central Missouri faculty, staff, and students in grant and research activities, safety training programs, and other cooperative initiatives.
- Promote partnerships with federal, state, and local agencies, safety advocate groups, civic organizations, business and industry, and other professional organizations.

- The Central Missouri Police Academy is located at 200 Ming Street, adjacent to the University's main campus.
- The administrative offices are located in the Humphreys Building in Suite 200

Central Missouri Police Academy & Institute for Public Safety

Conducted on the campus of the University of Central Missouri, the CMPA, a division of the Missouri Safety Center, is a 600-hour basic law enforcement academy and full-service continuing education provider for those interested in pursuing or furthering a career in public safety (law enforcement, fire, emergency medical services and homeland security). The CMPA is approved by the Missouri Peace Officer Standards and Training (POST) Commission to provide the Peace Officer basic training academy.

The Missouri Safety Center is an organization dedicated to highway safety; providing a liaison unit that serves the University of Central Missouri personnel, state and local officials, business, industry and the general public.

Center activities include programs of instruction, research, conferences and special services, as well as publications and public information.

In addition to its solid grant operations, the Center also houses the Statewide Motorcycle Safety Program, the State Breath Alcohol Training and Testing Lab, the Missouri School Bus Driver Trainer Certification Program, the State's Driver Improvement Program, the Central Missouri Police Academy & Institute for Public Safety, and the Institute for Rural Emergency Management.

INSTITUTE FOR RURAL EMERGENCY MANAGEMENT

The Institute for Rural Emergency Management strives to achieve the organizational purpose through work in these key project areas:

- Emergency management best practices for rural communities.
- Rural environmental protection
- Develop capacity in emergency service organizations through training opportunities
- First responder training
- Emergency responder safety and health workshops
- Educate future emergency managers and engage student scholars in community preparedness: fact sheets, exercises, and case studies.

The Crisis and Disaster Management (CDM) program at the University of Central Missouri is an **entirely online degree program**, making it available to students in a wide variety of locations, both on campus and off.

The courses offered in Crisis and Disaster Management are designed for:

- Public safety personnel (emergency management, fire, and police)
- Institutional emergency planners (schools, hospitals, and facilities)
- Community service providers (Red Cross, relief organizations, and disaster recovery)
- Industrial emergency responders (fire, rescue, and hazardous materials)
- Business continuity planners (banking, corporations, insurance, and manufacturing)

Research and Technology

In the area of research and technology transfer, the Center commits many activities and hours to the collection of data that drives the grant operations of the Center. This includes hands on observational studies on public behavior, crash data analysis and equipment evaluation to keep technology and training on the cutting edge in the state. Many of these activities are done in conjunction with the Highway Safety Division of MODOT, which may also provide funding for follow up countermeasure activities.

Research Activities

K-2 (Spice): A groundbreaking study conducted to investigate the chemical and psycho-physical impairment properties of synthetic cannabinoids (*to-date, the only study of its kind to incorporate human-subject dosing*).

The HawkEye Video System: A device used to accurately record HGN (horizontal-gaze-nystagmus) in the field, was evaluated to determine effectiveness and applicability for use in law enforcement.

Targeted Seatbelt Usage Surveys: Statewide, Commercial Vehicle, Teen (High School), Pick-up Truck, Rural County, Partners in Prevention.

Targeted Safety & Device Usage Surveys: Distracted Driving, Child Safety Seat, Booster Seat, Motorcycle Helmet.

Draeger 5000: The saliva drug screening instrumentation was evaluated during a Center research study in cooperation with the Department of Health and Senior Services (DOHSS) and several law enforcement agencies across the state of Missouri to determine effectiveness and applicability for law enforcement.

WE PROVIDE TRAINING & AWARENESS OF SAFETY ISSUES WITH AN EXPERTISE IN HIGHWAY SAFETY.
